

Unit Tests:

Test	Test added / Class Partition
AverageGradeTests.testGetAverageGrade	Class 1: List has multiple elements in it This test was already here from milestone 2
AverageGradeTests.testGetAverageGrade2	Class 2: List is empty Throws exception for Dividing by 0! <- Bug Changed code to handle this case. Test now passing—function can now handle empty lists by returning 0.
AverageGradeTests.testGetAverageGrade3	Class 3: take boundary (0) and add one for BVA. So one Item in list. Passed with no issues
